DETAILED ACTION

Terminal Disclaimer

1. The terminal disclaimer filed on August 13, 2003 disclaiming the terminal portion of any patent granted on this application which would extend beyond the expiration date of the 6,208,895 patent has been reviewed and is accepted. The terminal disclaimer has been recorded.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

3. Claim 32 is rejected under 35 U.S.C. 102(e) as being anticipated by Sullivan et al. (Pat. No. 5,713,925).

Sullivan discloses an apparatus capable of providing both pacing pulses and defibrillation pulses to a patient, and comprises a transfer circuit (generally the adapter 30 or elements thereof and/or electrodes 40) for externally transferring energy to the patient, and a controller coupled to the transfer circuit that causes the transfer circuit to externally transfer energy in a defibrillation pulse to the patient when defibrillation therapy is appropriate, and causes the transfer circuit to externally transfer energy in a pacing pulse to the patient when pacing therapy is appropriate (the control circuitry 268 that opens relay 256 as well as the charge button 278 as discussed in the text abridging columns 10 and 11, and the associated shock advisory components that allow defibrillation therapy to be applied).

Allowable Subject Matter

4. Claims 33-65 are allowed.

Regarding claim 33, the prior art of record fails to disclose the recited control circuit that couples an external defibrillation pulse to the first and second output leads

Art Unit: 3762

using the energy stored in the energy storage capacitor, and that couples an external pacing pulse to the first and second output leads using the energy stored in said energy storage capacitor. Related comments apply to claims 58 and 62.

Conclusion

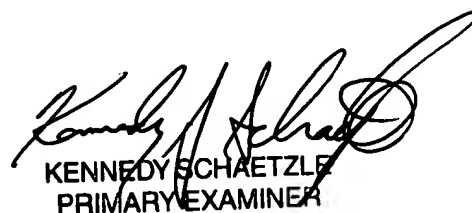

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
